⁵ Source of information is the Labour Force Survey (LFS) conducted in households. The methodology of labour market statistics within the framework of LFS was revised since 2018. The basis of the revision are concepts of "Resolution concerning statistics of work, employment and labour underutilization" adopted by the 19th International Conference of Labor Statisticians (19th ICLS) in October 2013. According to the new standards the operational definition for employment was revised and some indicator's renamed. As a result of the abovementioned changes, there has been an objective break in time series of labor market indices, which should be taken into account when comparing the respective indices with previous years.

⁶ According to the new standards, from the number of employed population excluded producers who within their household engaged in the production of goods for own final use. Depending on the nature of their activity in the labor market, the latter were classified in one of the mutually exclusive categories: "unemployed" or "population out of labour force".

⁷ Since 2018 the source of information is the database of individual records on income tax and social security tax authorized by the State Revenue Committee (SRC). For more details see http://www.armstat.am/file/article/sv_02_18r_142.pdf. In order to provide comparability of indicators on wages/salaries for 2017-2018 the 2017 indicator is provided by the database of SRC RA.
