

PART 2.

ARMENIA. HOUSEHOLD INCOME,
EXPENDITURES AND BASIC FOOD
CONSUMPTION

Chapter 6. Household Income, Expenditures, and Basic Food Consumption

This Chapter presents the dynamics of household income, expenditures and basic food consumption during 2004-2017. This analysis is based on the data of Integrated Living Conditions Survey. The source of information is the **Diary** of current expenditures, consumption, and incomes. All indicators of the household living conditions, as presented in this chapter, are estimated on per capita basis.

6.1. Household Disposable Income

Household income is one of the key indicators to assess the living conditions of the population.

Gross household income is composed of all monetary income and non-monetary income components, such as food of own production consumed (used) by households, in monetary terms, as well as non-food products and services received for free from relatives or other persons.

Households' monetary earnings include money received by household members as remuneration for work (income taxes and other mandatory social contributions excluded), funds generated from self-employment or entrepreneurial activities, social transfers (pensions, monetary social assistance, including unemployment, family, childbirth and childcare, and other benefits), private transfers, property rental income, interests, dividends, equity gains, revenues from the sale of shares and other securities, sale of real estate and household property, livestock, and own production food, scholarship, as well as funds received as assistance from relatives and other people, or other forms of monetary incomes.

The size and structure of monetary per capita nominal income of households over the periods of 2008-2009 and 2016-2017 are presented in Table 6.1.

As shown in Table 6.1, over 2008-2017, the share of monetary income increased and the share of non-monetary income decreased in the gross revenues.

The study of household income sources by the types of residential areas highlights the importance of income from hired employment especially for urban households, comprising 60.3% of their gross income in 2017 (Table 6.2). For rural households, the share of income received from hired employment is 1.7 times smaller than that of the urban households making 36.3% of their gross income. In 2008-2017 the share of income received from self-employment in urban areas increased from 9.9% to 10.5%, whereas in rural households this share increased from 4.1% to 6.2%. The share of income from sale of agricultural products and livestock decreased from 17.6% in 2008 to 15.8% in 2017. The share of non-monetary income, particularly of own production food is much higher in rural households compared to urban households, although it decreased compared to 2008. In 2017 the share of non-monetary income comprised 11.3% of the income of rural households and only 1.9% of the income of urban households. At the same time the share of private transfers decreased for urban households, whereas for rural households it increased (for urban households it decreased from 9.9% in 2008 to 8.4% in 2017; and for rural households - increased from 7.3% in 2008 to 10.3% in 2017).

Table 6.3 below presents the structure of monetary income by decile groups. The study of household monetary incomes shows distribution of income sources and its dynamics over time. During 2004-2017 the difference between the poorest and the richest decile groups of the welfare distribution in terms of income from hired employment decreased (from 98 times in 2004 to 75 times in 2017). Difference of incomes from transfers also decreased from 57 times in 2004 to 35 times in 2017.

Difference of incomes from sale of agricultural products between the tenths and the first decile groups increased from 7.7 times in 2004 to 11.6 times in 2017 (Table 6.3).

Source. *ILCS 2004, 2008-2017* *) except households who did not report their incomes

Public transfers are the main source of monetary income for households of the first decile group (51.8% in 2017), whereas in the tenth decile group the share of this source is very small (5.7%) (Table 6.4 and Figure 6.1).

The share of private transfers is the highest in the composition of monetary household incomes for the eighth decile group (11.6%) and compared to 2004 (10.4%) the share of this source of income has increased. In comparison with 2004, the share of this source of income in 2017 increased in the composition of monetary household income for the second, fourth, and sixth decile groups and decreased for all other decile groups. The share of this income source indicated for the first decile group is about 2 times lower than this share for households in the tenth decile (5.2% and 10.6%, respectively). It should be mentioned, that in 2017 the share of private transfers in the composition of monetary household income for the tenth decile group has dropped by about 1.8 times compared to 2004 (from 19% to 10.6%).

6.2. Household Consumption Expenditures

Another summary statistic which describes households' material and monetary welfare is the gross household consumption expenditures. Gross household consumption expenditures comprise monetary and non-monetary consumption expenditures expressed in monetary terms, such as own production food consumed (used) by the household, as well as non-food products and services received from relatives or the third persons for free.

Gross household consumption expenditures include the payments made by households during the reporting period to purchase food products (including expenses on food consumed by households away from home, own production food consumed (used) by the household and food received from relatives or third people for free, all expressed in monetary terms), and payments for non-food products (including expenses on durable goods) and services, as well as non-food products and services received from relatives and third people for free, all expressed in monetary terms.

Household consumption expenditures do not include taxes, collections, repayment of debts, alimony payments, assistance to relatives, penalties, loan repayments and other non-consumption expenditures, savings, as well as expenditures related to production activities (acquisition of seeds, animals, raw material).

Although starting from 2012 the RA National Statistical Service switched from «Republic of Armenia Types of Economic Activity» (NACE) classifier to «Individual Consumption by Purposes» (COICOP) classifier, data on consumption expenditures in this report is presented both by NACE and COICOP classifiers. Household consumption expenditures in sub-section 6.2.1 are presented by NACE classifier (to provide for the consistency of time series), while those in the sub-section 6.2.2 are presented by COICOP classifier.

6.2.1. Household Consumption Expenditures by NACE Classifier

Household Consumption Expenditures by NACE Classifier include the following:

Food products

- Meat and meat products
- Milk and milk products
- Fish and fish products
- Sugar and confectionary
- Butter and vegetable oils
- Potato
- Vegetable crops
- Fruits, berries, nuts and grapes
- Bread and bakery products
- Other products
- Food consumed away from home

Alcoholic beverages

Tobacco

Non-food products

- Clothing, textile, footwear
- Furniture, carpets, home appliances
- Hygiene supplies and medications
- Vehicles, spare parts and fuel
- Other non-food products

Services

- Housing and utilities, household appliances(phone excluded)
- Culture, recreation, and sports
- Education, training and preschool education
- Medical and health resort
- Transport and communications
- Other

The structure of household consumption expenditures in 2017 is presented in Figure 6.2. According to available data, the share of food expenditure in total consumption expenditures decreased as compared to 2004 (from 56.1% in 2004 to 41.5% in 2017) (Table 6.5).

Source. ILCS 2004, 2008, 2015-2017

The consumption of almost all food products has decreased in 2017 which is due to the increase of consumer price index for food as compared to previous year (by 4.1%). The share of expenses on food continues to be higher in the total consumption expenditures of rural households compared to that of urban households. At the same time, the share of expenses on food in rural households reduced from 62.5% in 2004 to 47.9% in 2017.

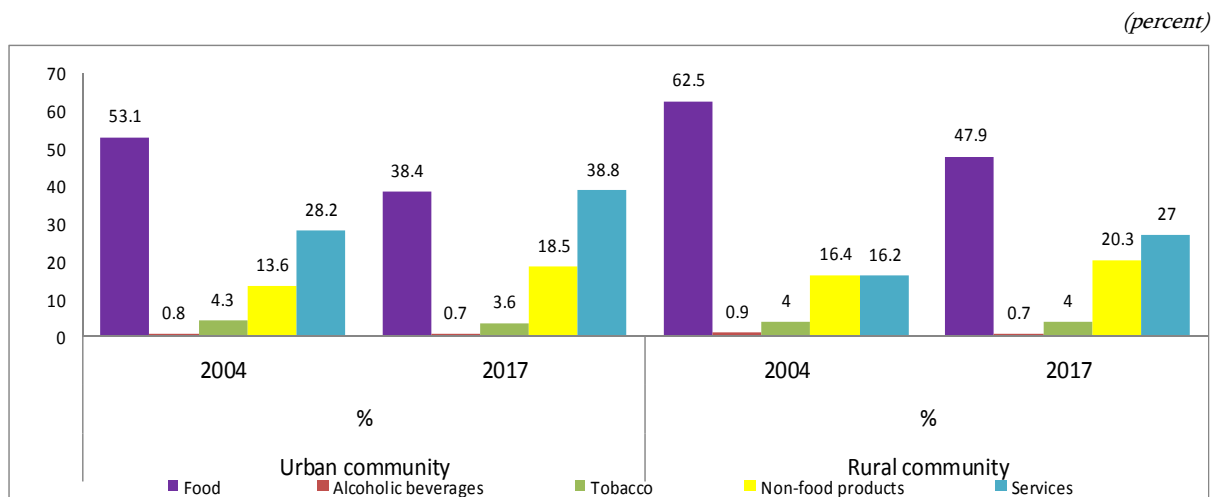

The share of expenditures on services, particularly on communication, has quite increased. The share of expenses on non-food products of rural population in consumption expenditures in 2017 has exceeded expenditures of urban population (20.3% and 18.5% respectively). The share of expenses on housing and utilities in total expenditures was larger for urban households than that for rural population (Table 6.6, Figure 6.3).

A more detailed breakdown of household consumption expenditures over the period of 2008-2017 by urban and rural communities is presented in Annex 3, Table A6.1.

6.2.2. Household Consumption Expenditures by COICOP Classifier (Individual Consumption by Purposes)

Consumption expenditures of households by COICOP classifier include the following:

1. Food products and non-alcoholic beverages
2. Alcoholic beverages and tobacco
3. Clothing and footwear
4. Housing services, water, electricity, gas and other fuel types
5. Furnishings, household equipment and routine household maintenance
6. Health
7. Transport
8. Communication
9. Recreation and culture
10. Education
11. Hotels, café and restaurants
12. Miscellaneous goods and services

6.3. Assessment of Inequality in Incomes and Expenditure Distribution

Information on household consumption expenditure is often more reliable than household income, since respondents often do not report or underreport their incomes (non-disclosure of income).

In order to distinguish the population by income or expenditures, one must calculate the ratio of “polar” quintiles, this is the ratio of income or expenditures of the top 20% population to that of the bottom 20% population. According to this assessment, the ratio of monetary income of the top 20% and the bottom 20% decreased in 2017 as compared to 2004 from 10.6 to 8.5 times; whereas the ratio in terms of consumption expenditures slightly increased from 5.8 times to 5.9 times (Table 6.9).

Table 6.9. Armenia. Ratio of Incomes and Expenditures of 20% Wealthiest and 20% Poorest Population, 2004 and 2008-2017

	2004	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017
By monetary income	10.6	7.8	8.0	8.0	8.0	8.5	8.2	8.8	8.4	9.4	8.5
By consumption expenditures	5.8	5.2	5.1	5.2	5.4	5.2	5.2	5.6	5.6	5.4	5.9

Source. ILCS 2004, 2008-2017

Table 6.10. Armenia. Ratio of Incomes and Expenditures of 10% Wealthiest and 10% Poorest Population, 2004, 2008-2017

	2004	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017
By monetary incomes	20.8	14.1	14.5	14.2	14.8	15.9	15.0	16.6	16.4	17.5	16.8
By consumption expenditures	9.5	8.0	7.9	8.1	8.5	8.2	8.2	9.1	9.0	8.3	9.8

Source. ILCS 2004, 2008-2017

The ratio of the “polar” deciles of population by income or expenditure (i.e. the ratio of income or expenditures of the best-off 10% population to that of the most vulnerable 10% population) is more distinct than the quintile ratio. In 2017 this ratio amounted to 9.8 times for consumption expenditures, and 16.8 for monetary incomes of population.

Analysis of the main indicator of inequality in terms of distribution of incomes and expenditures - the Gini coefficient – is presented in Chapter 3 of this report.

The change in the structure of average monthly per capita household consumption expenditures by decile groups over the period of 2004-2017 is presented in Table A6.2 of Annex 3.

As expected, for poor households the relative share of expenditures on food in total consumption expenditures is larger than the country average. During the reporting period (2004-2017) expenditures on services incurred by the first decile group households almost doubled (Figure 6.4, Table 6.11). The share of expenditures in total consumption expenditures incurred by the tenth decile households for purchase of services and non-food products significantly differs from the expenditures incurred by the first decile households.

*) including consumption cost of own production food

Figure 6.4. Armenia. Structure of Nominal Consumption Expenditures for Household of the First and Tenth Decile Groups in 2004 and 2017 (Average Monthly per Capita Expenditures)

Source: ILCS 2004 and 2017

* including consumption cost of own production food

The differences in consumption are clearly seen when expenditures on **energy** are examined as to the distribution of **consumption expenditures** by decile groups. Hence, in 2017 the average monthly per capita spending on natural gas by the first decile group constituted AMD 1165 and that by the tenth decile group – AMD 5 433; whereas the spending on electricity by these decile groups equaled AMD 1 384 and AMD 4 167, respectively.

6.4 .Consumption of Households

Food consumption is one of the indicators describing the living conditions of households. The term “consumed food” relates to food products purchased, produced in the own household, or received as donation during the reporting period.

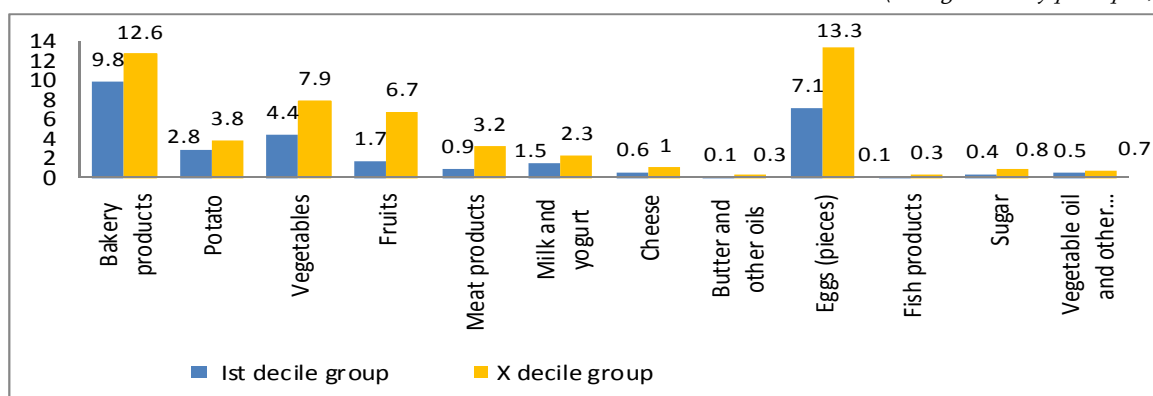

The consumption of food is grouped as follows:

- Bakery goods
- Potato
- Vegetables and vegetable crops
- Fruits and berries, including dried fruit
- Sugar
- Meat and meat products
- Fish products
- Milk and yogurt
- Eggs
- Cheese
- Butter and ghee
- Vegetable and other oils

The differences in consumption are clearly demonstrated when food consumption is examined as to the distribution of **consumption expenditures** by decile groups. In 2017 monthly per capita consumption of fish products in the tenth decile is 5.3 times higher than the consumption of this product in the first decile, consumption of fruit is 3.6 times higher, consumption of meat and meat products is 3.0 times higher, consumption of butter and eggs is 2.3 times higher, consumption of vegetables and garden crops as well as cheese - 1.8 times, consumption of milk and yogurt - 1.6 times higher (Figure 6.5)

Figure 6.5. Armenia. Consumption of Basic Food Products by Consumption Expenditures of the First and Tenth Decile Groups, 2017

(average monthly per capita, kg)

Source: ILCS 2017

The average monthly consumption of basic food products for 2004 and 2008-2017 by decile groups of consumption expenditures (on household per capita basis) is presented in Table 6.12.

Table 6.12. Armenia. Consumption of Basic Food Products by Decile Groups of Consumption Expenditures in 2004, 2008-2017
